<b>Introduction</b> ( <i>By Elio Borgonovi</i> )	XIII
<b>1. Operations Management in Healthcare: Why, What, and How?</b>	
1.1. Health care management past, present and future	1
1.2. Process management	4
1.3. Specificities of healthcare production processes	6
1.4. Specificities of public sector	9
1.5. Managing variability in healthcare delivery organizations	12
1.6. Process improvement	18
1.7. Definition and evolution of Operations Management in healthcare	22
1.8. Logistical Drivers	33
1.9. Performance of Operations Management systems	37
1.10. Reengineering public sector production: the case of Boston Housing Authority	40
<b>2. Patient Flow Logistics</b>	
2.1. Model of analysis and indicators	49
2.2. Operating Room Performance Indicators	60
2.3. Optimizing patient flows at Emergency Department (ED)	65
2.4. The patient-centered hospital model	73
2.5. Improving Quality through redesign of hospital patient flow logistics: the case of Boston Medical Centre (BMC)	87
2.6. Sasso hospital – Reorganizing hospital wards around intensity of care: how & why?	98
<b>3. Healthcare Supply Chain Management</b>	
3.1. Definition of supply chain management in healthcare	105
3.2. Innovation trends	107
3.3. Measuring supply chain performance: a theoretical framework	112
3.4. Integrated SCM strategies	121
3.5. The case of ESTAV logistical platform	128
3.6. Triggering innovation in logistics at Villandrea Local Health Authority: where to start?	131

**4. Models and Tools**

4.1. Lean Model	141
4.2. The Value-Based Health Care Model	152
4.3. Multidisciplinary Team	155
4.4. Focused Hospital	156
4.5. Patient Profiles	162
4.6. Queuing analysis in healthcare	163

<b>Conclusion</b> ( <i>By Eugenio Anessi Pessina</i> )	169
